Summary:

Scientific thinking and technological intervention in daily life can transform the quality of life in terms of welfare through development. Keeping in mind, this very fact Surendranath College organised the National Science Congress, portraying the theme- Technology and Rural development. Application of technology in rural areas can contribute to improvement of the quality of life, lived yet and can provide better services to the rural communities. Our honourable resource person Dr. Debaprasad Chatterjee very aptly described the nexus between technology and rural development in a very eloquent manner. He emphasised on the practice of positive interaction among the rural-urban community by highlighting the issue of solution sharing from individual to communities. A technical session was chaired by Dr. Chatterjee. Several papers under the said theme were presented successfully. An academic discourse with an informative-interactive session made the day a significant one. Students and faculty members of different colleges have joined this session in a large number.
