

Sl. No.	Scholar Name	Current research topic and interest	Collaboration with
1	Sanchari Chakraborty	<p>Current research topic: “Revisiting Polycystic Ovary Syndrome, Stress, Insulin Resistance, Obesity and Vitamin D Profile: Studies on Population of West Bengal”</p> <p>Research Interests: She has interest and experience on epidemiological study with hands-on experience in confocal microscopy, enzyme linked immunosorbent assay (ELISA) and advanced molecular biology. Currently she is focused on studying the multidisciplinary features of PCOS.</p> <p>Previous research: “Interaction of Sup35 Protein with Lipid Rafts and Lipid Vesicles” as project trainee, 2017 in Research Internships in Biotechnology based - Sciences and Engineering (RISE) in the department of Structural Biology and Bioinformatics at Council Of Scientific and Industrial Research–Indian Institute of Chemical Biology (CSIR–IICB).</p>	Medical College and Hospital, Kolkata.
2	Ankita Samaddar	<p>Current research topic: Genetic polymorphisms linked with polycystic ovarian syndrome and their influence on phenotypic manifestation of that particular disease.</p> <p>Research Interests: Possesses immense interest in diabetes and related disorders along with their genetic basis, special focus on genetic polymorphisms.</p>	Medical College and Hospital, Kolkata.
3	Randrita Pal	<p>Current research topic: Association of polymorphism of Vitamin D linked genes with Parkinson’s Disease.</p> <p>Research Interests: Genetic polymorphism and its linkage with various prevalent diseases.</p>	Institute of Neurosciences, Kolkata.
4	Farzana Begum	<p>Current research topic: Genetic Associations between Oxidative stress and neurodegenerative diseases.</p>	

		<p>Research Interests: Interested in studying neurodegenerative diseases, stem cells and cancer.</p> <p>Previous research: Stem cells and regenerative medicine.</p>
